

**Statistics Without Borders - urgently looking for Methodologists to help with Measuring world-wide humanitarian crisis for refugees**

The world-wide humanitarian crisis for refugees is one the international voluntary organisation - Statistics Without Borders (SWB) would like to address.

However, unlike other refugee crisis, the population is very transient and therefore very difficult to define.

SWB is looking for methodologists with extensive experience in transient populations, including those with experience with capture-recapture, adaptive sampling, and adaptive link-tracing designs; to volunteer to help in the design of the project.

The first part of the project would be a brainstorm with a group of methodologists with extensive experience in hard-to-reach populations.

If you have experience with both defining the population and surveying transient populations and are interested in working on the early stages of this project, please contact Cathy Furlong at [cathy.furlong@cox.net](mailto:cathy.furlong@cox.net) ASAP. Please include a brief summary of your experience.

Note: all SWB participants will be expected to sign a confidentiality agreement.
