Description
The IASE 2015 Satellite is organized around the broad theme: Advances in Statistics Education: developments, experiences and assessments. The Program Committee is calling for contributions of papers and posters that fit with the theme listed above and/or that address these sub-topics in connection with the broad theme:

Topic 1. Motivating teachers and students
Topic 2: Big data, official statistics, and statistics education
Topic 3: Advancing statistical education using technology and mobile devices
Topic 4: Statistics education in the age of social networking & distance education.
A submission will require a 300-word abstract by January 30, 2015 via the conference website. An option for refereed submissions is available. A submission could report about a recent study or about the design and outcomes of a project, innovation or intervention, that can inform and improve the teaching, learning and understanding of statistics or probability at all levels and in diverse contexts. IASE Satellites usually bring 90-120 participants from around the world and the host country to share their passion, expertise and experiences in statistics education. We expect a warm, informal meeting with a mix of plenary talks, paper sessions and interactive poster sessions. In addition, while the working language of the conference is English, there will be several hands-on pre-conference workshops in Portuguese and Spanish, and possibly 1-2 paper sessions in Portuguese and Spanish, to contribute to capacity building. We invite you to join us for sharing knowledge, questions and ideas that can help to advance statistics education and learn from the work of colleagues from around the world. The Satellite ends on July 24, 2015 to enable those attending the 60th World Statistics Congress an easy move and sufficient time to explore Rio, before the opening ceremony of WSC60 on the evening of July 26.
