Description
The main purpose of organizing a conference on small area estimation in Chile is to assess the current state of development and usage of small area methodology. We hope that this meeting will serve as a bridge between statisticians and practitioners working on small area estimation in academia, private and government agencies. Holding the meeting in Santiago will give researchers in Latin American countries an opportunity to learn about state-of-the-art small area estimation techniques from the experts in the field.
Our aim for this conference is to have as many invited sessions on focused research areas as possible. However, this will not be a closed meeting, and we will use special topics, contributed and poster sessions to accommodate people who might be interested in presenting their work, but cannot be included in an invited session due to time limitations. In addition, we will keep ample time for floor discussions in each invited session.
