

International scientific and practical conference **“Statistical Assessments of Sustainable Development”**

27–28 January 2022

Location: Saint Petersburg, Russia

Dear Colleagues!

We invite you to take part in the next international conference on statistical measurement and applied statistics.

In 2015, the leaders of the Member States of the United Nations adopted the 2030 Agenda for Sustainable Development, which includes 17 global goals and 169 economic, social and environmental challenges that humanity must address in order to achieve sustainable development. The statistical community plays a huge role in this process. The purpose of the conference is to study, exchange and disseminate experience and knowledge in the field of theoretical foundations and practice of measuring sustainable development goals (SDGs).
